Project Gutenberg offers an extensive library of free eBooks, with a focus on classic works whose U.S. copyrights have expired. Thousands of volunteers have diligently digitized and proofread these titles, ensuring they are available to everyone without any costs or registrations. The collection is constantly growing, thanks in part to the efforts of dedicated volunteers who contribute by digitizing, proofreading, and formatting eBooks. Users can access Project Gutenberg's library using their regular web browsers or eBook readers, eliminating the need for special apps. This platform has been providing free eBooks since 1971, when its founder, Michael S. Hart, created the first eBook on July 4 of that year. Over the years, Project Gutenberg has accumulated a vast collection of the world's great literature. Additionally, users can explore audio book options through Project Gutenberg's partnerships with various organizations. These include human-read audio books from LibriVox and computer-generated titles using text-to-speech automation. The platform also offers high-quality neural text-to-speech technology audio books in collaboration with Microsoft and MIT. Project Gutenberg is grateful to its volunteers for reaching this milestone anniversary and invites users to explore their vibrant collection, share it with others, and consider supporting the project through donations or contributions of time.
