Now that youve finally paid your phone off, Apple went ahead and announced another new iPhone. This means youll be upgrading, so you may be thinking about selling your existing phone to put towards the purchase of your new device. We say go ahead, and urge you to remember one important nugget of information: you need to unlock your phone before it can be sold. The term unlock can sound rather intimidating, but this simply refers to your phone's ability to switch to a new carrier. When you're under contract with a provider like Verizon or T-Mobile, you typically won't be able to unlock your device if you still have a balance to pay on your device. While the unlocking process isnt too difficult, the steps will vary from one carrier to the next. Thats why we've put together this guide to teach you how to unlock your device for all major U.S. carriers. Julian Chokkattu / Digital Trends Unlocking a Verizon phoneJust wait. Verizon automatically unlocks its phones 60 days after purchase. According to Verizon's policy, newly purchased devices are locked to Verizons networks for 60 days after purchase to help mitigate theft and other fraudulent activity. This rule applies to both postpaid and prepaid devices, and the lock is automatically removed after 60 days. Deployed military are exempt from this rule and can request an unlock during this period by calling Verizons support line at 800-922-0204. Past 60 days and your device doesnt seem to have unlocked? Call Verizons support line at 800-922-0204. AT&T Unlocking an AT&T phoneYou can unlock your AT&T phone using AT&T's unlocking portal. But first, you'll need to complete the following checklist of prerequisites: The device must work on AT&T's networks.If youre a current customer, your contract or installment plan must be fully paid off (including early termination fees). If not, pay off your plan early and wait 48 hours before making a request.It must not have been reported lost, stolen, or involved in fraud.The account must be in good standing not associated with fraudulent activity.On a postpaid account, it must have been active for at least 60 days, with no past due or unpaid balance.If its an AT&T prepaid device, it must be in service for at least six months.If its a business device and youve upgraded early, you must wait for the 30-day buyers remorse period to end before unlocking your old phone.If its a business device, then you must have your company's permission.For military personnel, email AT&T your TCS or PCS (temporary/permanent change of station) documents to unlock before your contract or payments and unlock for you after the device. Apple iPhones dont need an unlock code. Instead, after receiving the email approving your unlock request, just remove your AT&T SIM card and insert the SIM card for your new carrier to begin the setup process. Military members can unlock iPhones, including those on installment plans, but must register active-duty status when filling out AT&T's forms. T-Mobile Unlocking a T-Mobile phoneT-Mobile may well be the "un-carrier," but it has some very similar criteria for unlocking to other carriers. T-Mobile now sends you a notification when your phone is ready to be unlocked, but there are some eligibility requirements you need to be aware of. Heres what youll need to keep in mind if you want to unlock your T-Mobile phone. It must be a T-Mobile device.It must not have been reported lost, stolen, or blocked (via IMEI).It must be attached to an account that is in good standing.On postpaid accounts, the device must have been fully paid for and have been active for at least 40 days on the requesting line.On prepaid accounts, the device must have had more than \$100 in refills since the first use date or have been active for at least a year. It also needs to have been purchased over 14 days ago.If using T-Mobile's Equipment Installment Plan, or if your phone is leased through JUMP! On Demand, all payments must be made, and the device must be fully paid for.Youve made fewer than two unlock requests, per line, in the last 12 months.T-Mobile may request to see proof of purchase. Many Android phones from the carrier can be unlocked through their settings menus once eligibility requirements are met. Others, such as the Google Pixel and older Samsung devices, can use Device Unlock apps from T-Mobile. However, these methods are not compatible with all phones. The iPhone, in particular, does not have an iOS version of the T-Mobile unlocking app. T-Mobile should send unlock notifications to your iPhone once it is eligible and may send you an unlock code. If you dont have this information, contact T-Mobile directly and ask for it. Consult this T-Mobile page for specific instructions regarding your Apple device. You can otherwise unlock your phone through a live chat with a T-Mobile customer representative or by calling 611 from a T-Mobile device or 877-746-0909 from any other phone. Deployed military personnel can also get their phones unlocked as long as they're in good standing and can produce deployment papers. Metro by T-Mobile Unlocking a Metro by T-Mobile phoneMetro by T-Mobile, formerly known as Metro PCS, phones can be unlocked via their unlocking portal once you have completed the following checklist of prerequisites: It must be from Metro.It must not be reported as lost, stolen or blocked.It must have had active service for a minimum of 180 consecutive days (about six months).If you have a warranty exchanged handset, then the 180 days is based on the activation date of the original phone.The 180-day service requirement is waived for military personnel who can visit a corporate store with deployment papers and an agent will provide an unlock code for your device. One method of unlocking is through the Device Unlock App, usually found in the Metro by T-Mobile folder of your phone. This can be done with most Android smartphones, and only Samsung phones have the ability to unlock through a settings menu. If you have a Samsung phone 2019 or later, head to Settings > Connections > More Connection Settings > Select Network Unlock. If you have an Apple device, once it becomes eligible, Metro by T-Mobile will automatically authorize, and initiate unlock for your device remotely. To complete the unlock on your device, Verify that your device is eligible to be unlocked, make sure your device is on Wi-Fi, insert a non-T-Mobile SIM card into your iPhone and complete the first-time use. If the device has already been set up, follow the on-screen instructions to sign in to your Apple ID. Since rebranding, Metro by T-Mobile now operates in the GSM network as opposed to CDMA, so your unlocked Metro phone will only be able to work with other GSM carriers like T-Mobile and AT&T. U.S. Cellular How to unlock a U.S. Cellular phoneMost U.S. Cellular phones are sold unlocked. The rest will, generally speaking, unlock automatically after a 120-day lock period. Since February 1, 2016, most of U.S. Cellulars 4G LTE devices are sold unlocked. Those sold before that date can potentially be unlocked through an over-the-air update, so make sure your device is up to date before contacting U.S. Cellular about unlocking. If that doesnt apply to your device, or if you have a 3G or 1X device, then youll need an unlock code from U.S. Cellulars customer service line on 611 (from a U.S. Cellular device) or 888-944-9400 on another device. Like other carriers, U.S. Cellulars unlocking procedure is fully in-line with CTAs guidelines on unlocking its devices, and will unlock phones and tablets, as long as they adhere to the following criteria: It must be a device from U.S. Cellular.The device in question must not have been lost, stolen, or obtained fraudulently.The device in question must have been fully paid for.A specific range of popular phones from Apple and Samsung, whether prepaid or postpaid, are subject to a 120-day lock policy to deter theft and fraud. An account in good standing that meets those requirements can still request an early unlock. As is usual, deployed military personnel can also get their device unlocked earlier by presenting their deployment papers, as long as their account has no past-due balance. U.S. Cellular warns some devices cant be unlocked, either because of the age of the device or because it doesnt have the technology to access other networks. If it sounds like your device might fall under that, you can contact U.S. Cellular on 611 (from a U.S. Cellular device) or 888-944-9400 on another device.iPhone error message? Heres what to doYou might see this message on your computer or on your iPhone: The SIM card inserted in this iPhone does not appear to be supported. Only compatible SIM cards from a supported carrier may be used to activate iPhone. Please insert the SIM card that came with your iPhone or visit a supported carrier store. If you see that message, do this: Since iOS 14, you can check your phones status. Go to Settings > General > About and scroll down to the section called Carrier Lock. This section should say No SIM Restrictions. If you dont see that message, then your carrier probably hasnt unlocked your phone yet. Contact your carrier immediately to find out what is going on. This should be enough to get your iPhone properly unlocked, but if you keep having difficulties, you may have to restore your iPhone to factory settings and reboot from a backup. Boost How to unlock your prepaid or pay-as-you-go phoneThere are, of course, folks who have prepaid and pay-in-full devices. Unlocking these is, for the most part, relatively straightforward. While there was already a generalized unlocking policy, the Cellular Telephony Industries Association (CTIA) put forth a set of standardized unlocking policies for cell phones and tablets. The terms require carriers to unlock a phone paid in full, or a prepaid phone in service for a year, if a subscriber requests it. Cellular providers also have to alert subscribers when their handsets are eligible for an unlock. Finally, carriers must unlock phones for U.S. military personnel upon request. Metro by T-Mobile, U.S. Cellular, and Verizon have all complied, and AT&T's policies were already in line with the terms. Unlocking your phone doesnt mean you can just take it to any other provider. While some modern phones are built for that kind of compatibility, others are still only designed for the network capabilities and features of a particular carrier. Most carriers offer an online Bring Your Own Phone tool to see if your unlocked device will work well on their network. Youll just need to enter your devices IMEI number to get an instant check.Dont forget about third-party lock breakers!These are less needed now all U.S. networks offer unlocking, but if you encounter problems with an official carrier unlock, you can still opt for an IMEI unlock, which works identically to the official carrier unlock. There are plenty of IMEI unlock companies, but its best to go with trusted vendors. Check review sites like Trustpilot before making a final decision or paying up. The price to unlock an iPhone varies based on your carrier. Lock breaker services support models from the newest iPhone series all the way back to the iPhone 4. Most third-party unlocking services operate the same way. From their website, you pay varying amounts, usually under \$100, for an email-based unlock code. Most require an upfront payment. Reputable unlocking services have customer support lines and deliver codes quickly. Here are several of these providers we recommend: No luck? Buy an unlocked phoneWhen all is said and done, the best option for most people is usually purchasing an unlocked phone rather than figuring out how to unlock one. First of all, it saves you the hassle of getting it unlocked. Originally, the tool was designed to help users bypass various types of Android screen locks. LockWiper (Android) can help you remove all kinds of screen locks, including pattern locks, PIN, face lock, and password. The screen lock removal success rate of this tool is very high and the besting about it is that there's no data loss when you remove screen lock via LockWiper (Android). Check the detailed guide here to learn about how to unlock my phone without any data loss. 2. dr.fone Unlock (Android) dr.fone Unlock (Android) is another popular tool that can help you bypass Android screen lock pretty easily. This tool is capable of removing all kinds of screen locks, such as fingerprint lock, password, PIN, pattern lock, etc. You can get rid of the screen lock without losing your valuable data via this powerful and user-friendly tool. 3. iSkysoft Toolbox Unlock (Android) If you forgot your Android screen lock password, dont worry. iSkysoft Toolbox can help you remove it without requiring any details. It is one of the best screen lock removal tools because of its high success rate and user-friendly interface. It is compatible with many Android devices. It is recommended that you use the iMyFone LockWiper to remove screen lock on your device without data loss. However, if you need to know more tools or other Samsung unlock tools, then this is for you. Just check it and get everything done. Part 3. Free Device Unlock Apps: Unlock SIM Network Lock 1. DoctorSIM Unlocking your SIM card free via DoctorSIM is quite easy. To do that, you simply need to visit their official site and fill up a request form, providing the details about your phone as well as your current network carrier. Once the form is submitted and the payment is made, DoctorSIM team will send you an email providing step-by-step instructions to unlock phone free with imei number. 2. GalaxSIM Unlock GalaxSIM Unlock is a powerful app that has been designed to help Samsung Android device users easily unlock SIM card lock. The app provides easy to follow guidelines about how to unlock the device so you can use other SIM networks with your device without any PIN unlock or code requirement. 3. CellUnlocker.Net:Although CellUnlocker.Net is not free when it comes to unlocking SIM card lock on your Android phone, you can search and find codes/coupons for discounts. This tool uses the IMEI number of your device to unlock the phone, allowing you to use any network carrier in your device without restrictions. The service comes with 24-hour support which can help you perform the necessary steps to unlock your device. Conclusion In conclusion, the best free device unlock apps for Android lock removal can be a lifesaver when you find yourself locked out of your device. Whether youre dealing with an FRP lock, screen lock, or SIM network lock, the tools mentioned above offer reliable solutions to regain access and control over your Android device. However, if you want an all-in-solution to all your Android lock removal concerns, then you should use iMyFone LockWiper (Android) . iMyFone LockWiper (Android) can help you conveniently remove screen lock as well as FRP lock on Android devices. AT&T Device Unlock App AT&T Android phones directly from the app in minutes. T-Mobile Device Unlock App Use this app to request a permanent or temporary unlock on T-Mobile devices. Metro by T-Mobile Unlock eligible Metro Android phones with a simple in-app request. Samsung SIM Unlock App: For select Galaxy models, unlock your phone through built-in Samsung settings. Third-Party Unlock Apps (e.g., DoctorSIM) Use trusted services to unlock phones not supported by carrier apps. Carrier unlock apps are tools provided by mobile carriers like AT&T, T-Mobile, and sometimes Verizon to help users unlock their smartphones directly from the deviceno tech skills or special codes required. These apps are typically pre-installed on eligible Android phones and offer a convenient, step-by-step method to request a permanent unlock. While each carrier has its own rules and processes, the idea is the same: once your phone meets the carriers requirements (like being paid off and not reported lost or stolen), you can use the app to request an unlock in just a few taps. This method is especially helpful for people switching carriers, traveling internationally, or buying a secondhand phone thats still locked to a U.S. network. Unlocking your phone has never been easier, thanks to a variety of carrier and third-party apps designed for quick and hassle-free network unlocking. Below is a quick comparison of the top 5 unlock apps, showing their carrier compatibility, device support, unlock types, and ease of useall in one place. App NameSupported CarrierDevice TypeUnlock TypeUser LevelAvailabilityAT&T Device Unlock AppAT&TAndroid onlyPermanentBeginner-friendlyPre-installed on T-Mobile devicesMetro Unlock AppMetro by T-MobileAndroid onlyPermanentBeginner-friendlyPre-installed on Metro devicesSamsung SIM Unlock (Settings)Varies (AT&T, T-Mobile/Samsung Galaxy phonesPermanent (if eligible)Easy to moderateIn Settings on some modelsDoctorSIM / Third-Party AppMajor/global carriersAndroid & iPhonePermanentModerate to advancedOnline or app-based access A carrier unlock app is a mobile applicationusually pre-installed on Android devices by wireless providers like AT&T or T-Mobilethat allows users to unlock their phones from a specific network. In simple terms, if your phone is locked, it can only be used with the carrier you bought it from. But once its unlocked, you can insert a SIM card from any compatible carrier and use the device freely. Unlike the traditional method that uses a long network unlock code (often 8 to 16 digits), carrier unlock apps make the process smoother by skipping the manual input. Instead of waiting for an email or calling support, users simply launch the app, tap a few buttons, and the request is sent directly to the carriers server. If your phone meets the eligibility criteria(such as being fully paid off and not flagged as lost or stolen)the unlock can be completed within minutes. Using a carrier app has its advantages. Its fast, convenient, and doesnt require you to deal with customer service or third-party websites. However, it also comes with limitations. These apps typically only work on Android phones and may not be available on every model. iPhones, for example, usually require a different unlock process that goes through Apple and the carrier directly. From a legal standpoint, unlocking your phone through the official app is completely allowed in the U.S. The FCC and CTIA support consumer unlocking rights, as long as the phone meets certain conditions. Whether youre switching carriers or traveling overseas, these apps give users more freedomwithout needing to be tech-savvy. Carrier unlock apps may seem simple on the surface, but behind the scenes, they perform a few important technical steps to process your unlock request securely. When you tap the Permanent Unlock option in the app, it doesnt just flip a switchthat starts a chain of communication between your phone and your carriers remote servers. The app gathers specific information from your device, especially your IMEI number, which identifies the device and acts like a digital fingerprint for your phone. This IMEI is then sent to the carriers system, which checks if your device meets all the unlocking requirements. Things like whether its been active for a certain number of days, whether its paid off, and whether its reported lost or blacklisted. To perform this verification and submit your request, the app usually needs an active internet connection, either via Wi-Fi or mobile data. Once the request is approved, the unlock is processed digitallymeaning no codes need to be entered manually. Your phone will often display a confirmation message, and you may be asked to restart your device to complete the unlock process. As for timing, the results can vary. On some devices and carriers, the unlock is instantyoull be notified right away. On others, especially if your request needs additional verification, it might take a few hours or even up to 48 hours. Either way, the app keeps things user-friendly and hands-off, making it one of the easiest ways to unlock a phone in 2025. Also read: How to Tell If Your Phone is Carrier Locked (With or Without SIM) Before you jump into unlocking your phone with a carrier app, its important to make sure your device meets the basic eligibility requirements. Most major U.S. carrierslike AT&T and T-Mobilefollow similar rules to prevent fraud and protect their network. If your phone doesnt check all the boxes, the app will likely deny your request. First and foremost, your phone must be fully paid off. If youre still making payments on a monthly installment plan, the carrier will hold off on unlocking it until the balance is cleared. This rule applies whether youre a new or longtime customer. Second, your device must not be reported lost, stolen, or blacklisted. Carriers share a database of flagged devices, and any phone on that list is automatically ineligible for unlocking. Even if you bought it secondhand, a flagged IMEI can block your unlock attempt. Next, your phone should have active service on the carriers network for a specific amount of time. This varies by provider. For example, T-Mobile might require 40 days of usage on the same account, while AT&T might have slightly different timeframes depending on whether your line is postpaid or prepaid. Finally, your account must be in good standing with no unpaid balance or overdue bills. If your account is suspended or under review, the unlock request may be delayed or denied until the issues is resolved. Checking these requirements ahead of time can save you frustration and make the unlocking process smooth and successful. The AT&T Device Unlock App is available only for Android devices, primarily those made by Samsung, LG, Motorola, and other Android-friendly brands. If your phone came pre-installed by AT&T and runs Android, you likely already have it. Note that iPhones arent supportedyoull need to use AT&T's online unlock portal or contact customer service instead. On qualifying AT&T Android devices, the app usually arrives pre-installed and can be located in your app drawer. Some users have asked if its available on the Play Stores generally not downloadable, as AT&T distributes it directly on compatible models.Open the Device Unlock App from your phone. Tap Continue to accept terms and move forward. Select Permanent Unlock (unless you only want a temporary unlock for travel). The app will send your IMEI to AT&T's servers and provide an on-screen status message. Once you see the confirmation, restart your device to finalize the unlock. Device not eligible for unlock Make sure your phone is fully paid off, not blacklisted, and has met all usage requirements. Unlock failed try again later This usually indicates a server hiccup or temporary network issue. Try again in a few hours, preferably on Wi-Fi. IMEI not recognized Double-check youre using the correct IMEI (dial #06# to find it). If it still doesnt match, log into your AT&T account or call customer support to verify the device status. Following these steps and double-checking eligibility requirements will help ensure a smooth unlock experience using AT&T's official app. Also read: SIM Unlock Issues After Carrier Unlocking How to Fix Them Fast The T-Mobile Device Unlock App is typically pre-installed on many newer Android modelsespecially those originally purchased through T-Mobile. If your phone runs Android and was sold directly through T-Mobile, theres a good chance the app is already installed. Just like with AT&T, iPhones are not supported by the app. If youre using an iPhone, youll need to lock it online via T-Mobiles website or contact customer support. Located and open the Device Unlock app from your app drawer. Select Permanent Unlock (unless you need a temporary unlock for travel). The app will provide on-screen instructionsagree to terms and proceed when prompted. Wait as it verifies your IMEI and processes the request through T-Mobiles servers. Once you receive confirmation, restart your phone to complete the unlocking process. Server not responding error This generally indicates network issues. Switch from mobile data to Wi-Fi, or try again later when connectivity improves. Unlock request failed Your device may not meet all eligibility criteria(check that its fully paid off, not blacklisted, and that your account is in good standing. If everything seems correct, wait a few hours and try again. App missing from your device First, search for Device Unlock in your app drawer or settings. If its truly missing, go to T-Mobiles unlock policy page and request an unlock through the web portal. You can also call T-Mobile support to submit your IMEI manually. By following these steps and ensuring your device meets all requirements, you can unlock your Android phone from T-Mobile quickly and without needing a special code. Unlike AT&T and T-Mobile, Verizon doesnt use a carrier unlock appbecause it doesnt need one. Under Verizons policy, all postpaid and prepaid Android and iOS phones automatically unlock after 60 days of activation. This hands-off approach means you dont have to install or run any special application. Once the 60-day period has passed and your phone remains in good standing, it becomes officially unlocked and ready for use with other compatible networks. To confirm your phones unlock status, simply insert a SIM card from a different carrier (for example, AT&T or T-Mobile). If your device connects to the new network and can make calls, send texts, and access mobile data, then its unlocked. Another way is to dive into your phones SettingsAndroid, navigate to Settings Network & Internet SIM status, or on iPhone, go to Settings General About and look for Carrier Lock: No SIM restrictions. If youre still unsure, you can always contact Verizon customer support and ask them to verify your phones IMEI and its unlock status for you. If you're looking for an app to help you unlock your phone, theres a good chance you already have it. Just like with AT&T, iPhones are not supported by the app. If youre using an iPhone, youll need to lock it online via T-Mobiles website or contact customer support. Located and open the Device Unlock app from your app drawer. Select Permanent Unlock (unless you need a temporary unlock for travel). The app will provide on-screen instructionsagree to terms and proceed when prompted. Wait as it verifies your IMEI and processes the request through T-Mobiles servers. Once you receive confirmation, restart your phone to complete the unlocking process. Server not responding error This generally indicates network issues. Switch from mobile data to Wi-Fi, or try again later when connectivity improves. Unlock request failed Your device may not meet all eligibility criteria(check that its fully paid off, not blacklisted, and that your account is in good standing. If everything seems correct, wait a few hours and try again. App missing from your device First, search for Device Unlock in your app drawer or settings. If its truly missing, go to T-Mobiles unlock policy page and request an unlock through the web portal. You can also call T-Mobile support to submit your IMEI manually. By following these steps and ensuring your device meets all requirements, you can unlock your Android phone from T-Mobile quickly and without needing a special code. Unlock request failed Your device may not meet all eligibility criteria(check that its fully paid off, not blacklisted, and that your account is in good standing. If everything seems correct, wait a few hours and try again. App missing from your device First, search for Device Unlock in your app drawer or settings. If its truly missing, go to T-Mobiles unlock policy page and request an unlock through the web portal. You can also call T-Mobile support to submit your IMEI manually. By following these steps and ensuring your device meets all requirements, you can unlock your Android phone from T-Mobile quickly and without needing a special code. Unlike AT&T and T-Mobile, Verizon doesnt use a carrier unlock appbecause it doesnt need one. Under Verizons policy, all postpaid and prepaid Android and iOS phones automatically unlock after 60 days of activation. This hands-off approach means you dont have to install or run any special application. Once the 60-day period has passed and your phone remains in good standing, it becomes officially unlocked and ready for use with other compatible networks. To confirm your phones unlock status, simply insert a SIM card from a different carrier (for example, AT&T or T-Mobile). If your device connects to the new network and can make calls, send texts, and access mobile data, then its unlocked. Another way is to dive into your phones SettingsAndroid, navigate to Settings Network & Internet SIM status, or on iPhone, go to Settings General About and look for Carrier Lock: No SIM restrictions. If youre still unsure, you can always contact Verizon customer support and ask them to verify your phones IMEI and its unlock status for you. If you're looking for an app to help you unlock your phone, theres a good chance you already have it. Just like with AT&T, iPhones are not supported by the app. If youre using an iPhone, youll need to lock it online via T-Mobiles website or contact customer support. Located and open the Device Unlock app from your app drawer. Select Permanent Unlock (unless you need a temporary unlock for travel). The app will provide on-screen instructionsagree to terms and proceed when prompted. Wait as it verifies your IMEI and processes the request through T-Mobiles servers. Once you receive confirmation, restart your phone to complete the unlocking process. Server not responding error This generally indicates network issues. Switch from mobile data to Wi-Fi, or try again later when connectivity improves. Unlock request failed Your device may not meet all eligibility criteria(check that its fully paid off, not blacklisted, and that your account is in good standing.
