Android Screen Mirroring on Chromecast Hero (Image credit: Android Central) Google makes it easy to mirror the screen of any Android phone to a TV connected to a Chromecast. You'll actually find the option to mirror your screen directly from the notification bar on Pixel phones, but you can mirror your screen directly from the Google Home app on any other phone. Make sure your phone and Chromecast are connected to the same WiFi network. Open the Google Home app on your phone. Click on the Chromecast device you want to mirror your phone to. Click Cast my screen. Source: Android Central Tap the broadcast screen. Google warns you against showing passwords or other sensitive data when recording or sharing your screen. Click "Start Now" to cast your screen to your Chromecast. You can control the volume in the Home app, and you can also click the Stop Mirroring button when you're done. Source: Android Central That's it! When you're done casting your phone to your TV, you'll find controls to turn off screen casting in the Google Home app or in the notification bar. Best Phone Deals for Cyber Monday: Live Roundup It's worth noting that screen mirroring works just as well with Google Smart Displays you might have set up at home. With everything set up in the Google Home app and running on the same WiFi network, you can send your phone screen to the Nest Home Hub (opens in a new tab) or Nest Home Hub Max (opens in a new tab). Follow the same steps. The Easiest Way to Mirror Your Phone to Your TV Most media apps today offer Chromecast support, but it's always nice to have screen mirroring for situations when you need it. Samsung recently removed the ability to use Smart View with non-Samsung branded devices such as a Samsung Smart TV or speakers. This means that many Samsung users with Android 11 or later cannot mirror with Reflector. We found a solution that satisfies the majority of users. This includes re-enabling Google Cast on your device. Device and use of broadcast instead of smart view to reflect the reflector. Follow the steps below to apply the solution. Step 1 Download the free Quick Settings app from the Google Play Store and install it on your Samsung device. Step 2 Launch the Quick Settings app and select Media. Step 3 Tap Upload and then select Enable Item. When the window describing the Quick Settings pane appears, tap OK. Step 4 Close the Quick Settings app and expand the expanded view of the Quick Settings taskbar: Swipe down twice from the top of the device screen. Make sure the tray is fully extended and more than one set of icons is visible. Step 5 Tap the three dots icon to see more options. Step 6 Choose the order of the buttons. Step 7 Now the broadcast icon will appear as an available option. Tap the Cast icon and drag it to the taskbar. Step 8 Tap Done at the bottom of the screen to save your changes. Step 9 The Cast icon will now remain in the Quick Settings bar. Tap it to open the broadcast menu. Select the name of the reflector-enabled device when it appears in this menu. Your Samsung device will now connect to Reflector using a Cast connection. Learn more about broadcasting Android devices to Reflector here. Smart View upload support is evolving rapidly and results may vary by model. Smart View can still be used to connect to Reflector and should be used as a backup if Smart View fails on devices running Android 11. Please don't hesitate to contact us if you have any questions! Your Android phone's small screen isn't meant for online fitness classes or joining a Zoom call. Instead of watching what's going on, you can magically cast or mirror your phone screen to the TV next to you with just a few taps. You need the right equipment to get the job done, but it protects you from potential neck strain. Screencasting is not only convenient for viewing, but also useful if you want to play some rounds between us. show everyone the latest TikTok trends you just miss. the best part? You may already have everything you need. If not, the installation is not that expensive. This is how you can start mirroring or casting the screen of your Android phone or tablet to your TV. All you need to mirror an Android device is a Google Chromecast with Google TV or an older David Katzmaier/CNET Chromecast. Everything you need to mirror Android phone to TV. This version of Android was released in 2014, so your phone or tablet is most likely running a newer version of Android. You can check this by opening the Settings app, going to About Phone and finding your version of Android. In addition to your Android phone or tablet, you'll also need a Google Chromecast streaming device, such as the recently released Chromecast with Google TV, a TV with built-in Chromecast, or a smart display like the Google Nest Hub. If you don't know if your TV supports Chromecast, the best way to check if it shows up as an available casting device is to use one of the methods below. Screen mirroring is integrated into the Home app. Screenshots: Jason Cipriani/CNET Screen Casting to TV Using Google Home The most reliable and consistent way to mirror your Android phone screen is to use the Google Home app. If you already have one of the Google Nest Wifi or Chromecast smart speakers set up, you probably already have it installed. If not, you can download it from the Play Store. Open the Home app and select the Chromecast you want to use. At the bottom of the screen there will be a button labeled Cast my Screen; touch it. You will have to accept a prompt reminding you that whatever is happening on your phone screen will be visible on TV to everyone in the room with you. You may also see a second prompt if your device is not optimized for mirroring. I had no problems when I encounter an alert. To stop screen mirroring, click the Stop Screen Mirroring button on the Home app. There is a shortcut: Quick settings panel. Screenshots by Jason Cipriani/CNET Depending on your phone, there's an easier way. Using the Home app is effortless, but there's an even easier way: use the download shortcut in the Quick Settings panel. Open the quick settings panel by swiping down from the top of your Android phone or tablet screen. There should be an option labeled Screen Cast. If you can't find them, you may need to click the pencil icon to change what is and isn't available in the quick settings panel. Once you find the Cast Screen button, select it and then select the device you want to cast your screen to from the list. It may take a few seconds to connect your phone to a Chromecast-enabled device, but once it's done you'll see a screen on the TV. Stop the download by repeating the same steps we just described. Would you like to show your photos? Mirror the screen. Juan Garzón/CNET But here's the thing: Not every phone has a broadcast button on the quick settings bar. It's not clear why, but if your phone doesn't have a shortcut feature, don't give up. You can still mirror your phone using the Home app. Remember that whatever is visible on your phone or tablet display is also visible on your TV when you mirror your screen. This means that all alerts and notifications are sent to everyone along with their content. I suggest turning on Do Not Disturb mode to keep disturbances to a minimum. Since there may be a delay between your phone and TV during the broadcast, play slower games and avoid more intense games like Fortnite. If you're looking for ways to get more out of your Chromecast, check out these tips. Google Assistant has a trick to keep in mind the next time a song gets stuck in your head. Play now: Watch this: Android tricks that iPhone can't imagine. Display your incredible photos on the big screen by connecting your Samsung mobile device to Samsung Smart TV. See how easy it is to project your favorite photos, videos, presentations and games onto the big screen to make them look bigger and better. Before trying the suggestions below for your solution, make sure your device software and related applications are up-to-date. Please check how to update your mobile device software in the following order. Step 1. Go to "Settings" > "Software Update". Step 2: Click Download and Install. Step 3. Follow the on-screen instructions. This is the easiest way to mirror your smartphone on your TV via Wi-Fi. Follow the steps below to crop an image using Smart View. Step 1: Swipe down from the top screen to open the Quick Access Toolbar > tap on the Smart View icon. Step 2. Select your TV from the list of available devices (depending on the TV, you may need to enter a PIN code). Step 3. In the pop-up message "Start broadcasting using Smart View?" select "Start Now". If the mirror image on the screen is small, you can change the aspect ratio. Step 1. Go to Smart View > click More options (three vertical dots). Step 2. Tap Settings > Phone aspect ratio. Step 3. Select full screen on the connected device to switch it to full screen mode. If you want to switch your connected device to full-screen mode when Smart View starts mirroring your phone's screen, you can enable "Save settings" as a convenient option. Please note that this may cause some applications to restart. Note. The mobile phone and TV must be connected to the same Wi-Fi network. Some TVs may require you to switch inputs or enable screen mirroring. Check if Smart View is enabled on your TV (Settings > General > External Device Manager > Device Connection Manager > Access Notification). Just tap the screen to view it on your TV. Touch View is a new feature for 2020. Just touch the TV with your phone and it will appear. must be prepared beforehand. Check if Smart View is enabled on the TV (Settings > General > External Device Manager > Device Connection Manager > Access Notification). Set up your phone. Tap the screen. Step 1: Open the SmartThings mobile app on your phone and tap on the menu icon (three horizontal lines). Step 2. Tap the "Settings" icon and then swipe the screen to select "Touch View", "Touch Sound". Tap the switch to turn it on. Step 3. Bring your phone closer to the TV and then tap the "Allow phone presence" notification when it appears on the phone screen. Note. To use the Touch View feature, update SmartThings to version 1.745 or later. It can be downloaded from the Google Play Store or the Apple App Store. When you start mirroring, you need to cancel the power saving mode in the power saving mode. Connecting to the SmartThings app You can also mirror to the SmartThings app by following the steps below. 1. Open the SmartThings app and select the TV you want to mirror. Step 2: Tap on "More options" (three vertical dots) > tap on "Smart View". Step 3. In the pop-up window, choose "Start Now", the message "Start streaming with SmartThings!" Connecting with a Dex or HDMI cable If you can't wirelessly connect your phone or tablet to your TV, you can mirror it with a Dex cable or a USB-C to HDMI cable. Step 1. Connect the Dex cable or USB-C to HDMI cable to the corresponding adapter. Step 2 Plug the other end of the cable into a port on your TV. Step 3. Connect the HDMI adapter to the USB port of the device. Step 4: In the notification, tap on the mirroring switch notification. Blackboard. Step 5: Follow the on-screen instructions to complete the device setup. Note. Screen mirroring starts automatically on some models. Note. Screenshots and device menus may vary by carrier, device model, and software version. Execution.
